

ENVIRONMENTAL POLICY 2026 - VERINDPLAST S.r.l.

VERINDPLAST S.r.l. has developed an Environmental Management System in accordance with the UNI EN ISO 14001:2015 standard and, within this framework, is committed to:

- implementing a sustainable business model based on the protection of the global ecosystem, the reduction of energy consumption, and the optimization of resource use;
- investing in low-environmental-impact equipment, products and materials, as well as in innovative and automated solutions capable of improving the efficiency of production processes and reducing waste, errors, consumption and handling operations;
- promoting digitalization as a driver of sustainability by adopting advanced IT tools and artificial intelligence-based solutions to monitor consumption, emissions, energy parameters and environmental performance in real time;
- adopting Green Procurement criteria by selecting suppliers that demonstrate environmental commitment, ISO certifications, ESG policies and transparency in resource management;
- preventing pollution by fully complying with applicable environmental legislation, including European regulatory updates such as the PPWR – Packaging and Packaging Waste Regulation, directing company choices towards more sustainable and recyclable packaging;
- training and informing all personnel on environmental issues, promoting responsible behavior and involving partners, customers, suppliers and interested parties;
- planning, monitoring and achieving environmental objectives, ensuring their integration into company processes;
- communicating the Environmental Policy, performance and objectives achieved both internally and externally, ensuring transparency and accountability;
- strengthening the company's commitment to energy efficiency through periodic energy audits, identifying opportunities to reduce consumption;
- integrating ESG (Environmental, Social and Governance) criteria into the company strategy, creating long-term sustainable value and contributing to corporate social responsibility;
- promoting circular economy principles by encouraging the reuse, recycling and recovery of materials, reducing waste generation and improving the management of process waste;
- measuring and reducing its carbon footprint by assessing direct and indirect emissions and adopting compensation and mitigation measures;
- improving the internal environmental well-being by monitoring air quality, microclimate, lighting and safety conditions, in order to ensure healthy and sustainable working environments;
- collaborating with public authorities, customers and local communities to promote environmental initiatives, sustainability projects and shared improvement programs.
